INNOVATION IN MECHANICAL WATCHES

Awarded in different invention fairs, Aniceto Jiménez Pita, a self-taught watchmaker and AHCI member has been passionate about watches since his early childhood. Aniceto creates his timepieces since idea inception to final personalization.

Every creation by Pita has its own personal appeal and is crafted with a unique purpose, ranging from the Carousel where the whole movement rotates in its own axis to tell time, to the 5000m water resistant Oceana diver's watch with 2 patented systems.

INNOVATION IN MECHANICAL WATCHES

www.pita.es

As Aniceto believes not everything has been invented in mechanical watchmaking yet, he has devoted himself to the search of creative innovations that could bring new functionalities or simplify the aesthetics of mechanical watches, patenting some of his ideas.

Being an independent watchmaker is about hand making unique watches; therefore Aniceto allows customization to a higher extent, giving freedom of choice in every element of the watch, to deliver one-of-a-kind timepieces.

Most of the designs are influenced by Barcelona, the city where Aniceto started his workshop more than 35 years ago, reflecting an authentic Mediterranean character in every timepiece.
